PREFIXES, SUFFIXES, AND STEMS

The following list gives the meaning of prefixes, suffixes, and stem that are commonly used to form scientific terms. Whenever you encounter a new term in your study of biology, break it apart and try to find the parts in this list. Such a habit will greatly simplify your mastery of biological vocabulary.

As an example, you might take the word *nephrology*. The stem *nephro*- is derived from the Greek word *nephros*, meaning *kidney*, while the stem *log*- is derived from the Greek word *Logos*, meaning *thought* or *study of*. You might later encounter the word *nephrolith*, and you would then only have to determine the meaning of the suffix *-lith* since you would already know the meaning of the first part of the word. Or when you ran across such words as *bacteriology* and *zoology*, you would probable have a good idea of what they mean. After some practice, you will be surprised how many new words you can define without looking them up.

It has often been necessary to add a vowel to combining forms for pleasing pronunciation. For example, *bacteri-+-logy* becomes *bacteriology*. For the same reason it has been necessary, at times, to drop or change a vowel in a prefix, suffix, or stem. For example, *gastro-* becomes *gastric*, the adjective pertaining to the stomach.

Most scientific terms are derived from either the ancient Greek or the Latin because neither of these languages is in used now so that they are unchanging, and also they are studied universally. As a result, you will find that Latin noun endings are often used in biology. As a help in determining the plural of words with Latin endings, you might memorize the following:
